PROFESSIONAL SUMMARY

AI Frontend engineer with **1.5+** years of experience building scalable web apps in React.js and Next.js, former founding engineer with a strong focus on performance and user experience.

EXPERIENCE

Frontend Engineer, [Oliv.ai](#)

Mar 2026 – Present

- Built "**Oliv Engage**" a Chrome extension for calling and messaging, from scratch to launch, enabling click-to-call, inbound calls, voicemail, and live SMS threads on any web page through a **Twilio**-powered softphone.
- Developed AI-suggestion review workflows for Oliv, letting sales reps review, accept, or override AI-generated field updates across deals, accounts, and contacts through type-aware review sheets and in-grid indicators.
- Delivered an end-to-end CSV export system across meetings, calls, and deals with async processing, email delivery, and row-level access control, including patching a cross-workspace data-exposure vulnerability.
- Built configurable data-quality guardrails for the sales pipeline, including stage entry/exit criteria, conditional field validation, and field-level constraints, all admin-configurable per organization.

Frontend Engineer, [Enclave](#)

Nov 2025 – Mar 2026

- Building frontend features for [fireplace.gg](#), a high-performance prediction-market trading terminal using Next.js, TypeScript, and real-time WebSocket-powered data.
- Implemented core trade flows across market discovery, filters and discovery, 15-minute markets, order execution, and portfolio views, while developing scalable UI components and optimizing performance.
- Designed and shipped key product surfaces including filters, wallet tracker and lists, PnL cards, leaderboards, referrals, deposit flows, and user preferences, improving trader visibility and engagement.
- Integrated Sentry and PostHog to instrument core trade flows and real-time interactions, track user behavior, and guide iterative UX and performance improvements.

Founding Engineer, [Bitscale.ai](#)

Feb 2025 – Nov 2025

- Led frontend architecture and major features using Next.js and TypeScript, managed Docker based CI/CD on AWS, contributed to Go backend workflows, and supported SOC2 compliance.
- Optimized **50+** data-provider workflows and built workbook (grouped-grid) systems, implemented programmatic SEO generating **20,000+** pages to boost organic reach.
- Built an agentic grid system (**BitPilot**) with LLM streaming and integrated PostHog analytics, developed internal admin panels, introduced Radix UI, and refactored the MVP into a stable production foundation.

PROJECTS

[pageo.me](#)

- Developed a scalable, all-in-one link management platform using **Next.js**, **TypeScript**, custom **Tailwind CSS**, **Drizzle ORM**, and **NeonDB**, with secure authentication via **BetterAuth**, rich **Framer Motion** animations, and seamless deployment on **Vercel**
- Growing the active user base to **100+** through continuous UX improvements.

[flib.store](#)

- Built flib's web app, designing and implementing core product flows end to end, and a B2B merch automation and order management platform using **Next.js**, **Drizzle ORM**, **Xata**, and **Zustand**, deployed on **Vercel**.
- Worked with clients such as **Google** and **Salesforce** to power custom merch items for their attendees.

EDUCATION

B'TECH, Computer Science, The Northcap University (**2021 - 2025**)
